

Ventoux : candidate for Mediterranean/alpine ISS

Main traits :

- Total area: 29 000 ha
- 20 km east-west range
- Calcareous bedrock
- Elevation range : 400-1900m
- Two highly contrasted North and South exposures
- Mainly covered by forest trees (about 80%)

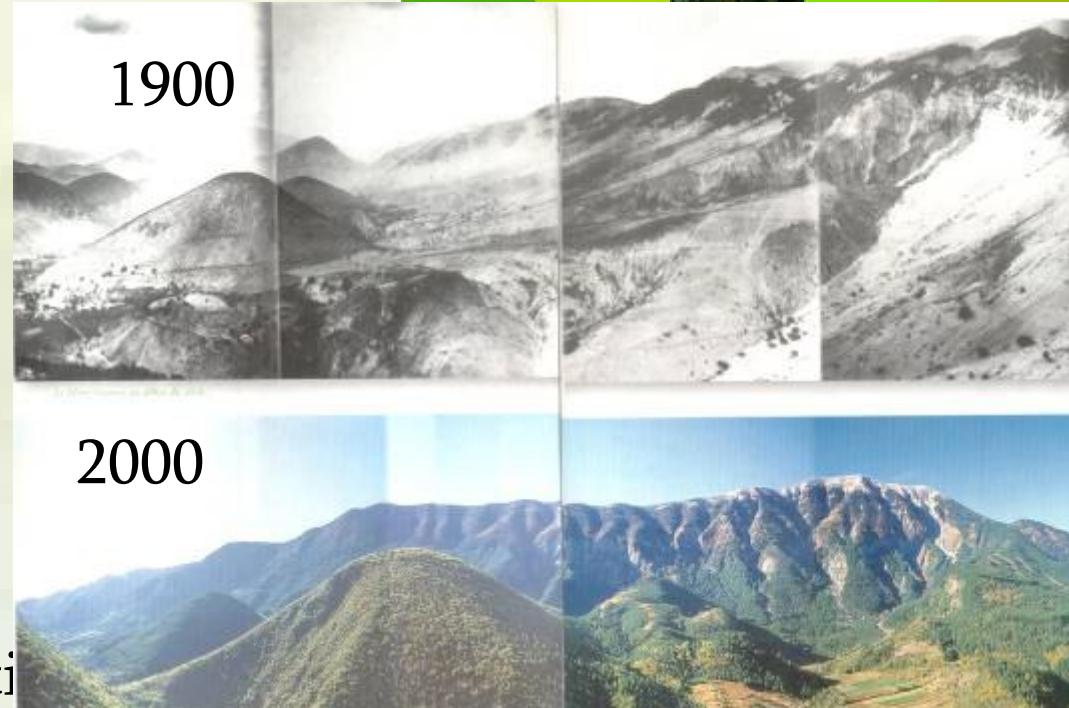

Ventoux : A long history of multidisciplinary researches

A highly dynamic forest composition:
1850 : very scarce vegetation due to deforestation and over-grazing

1860 -> 1950 : intensive afforestation for soil restoration and erosion control (mainly with pines)

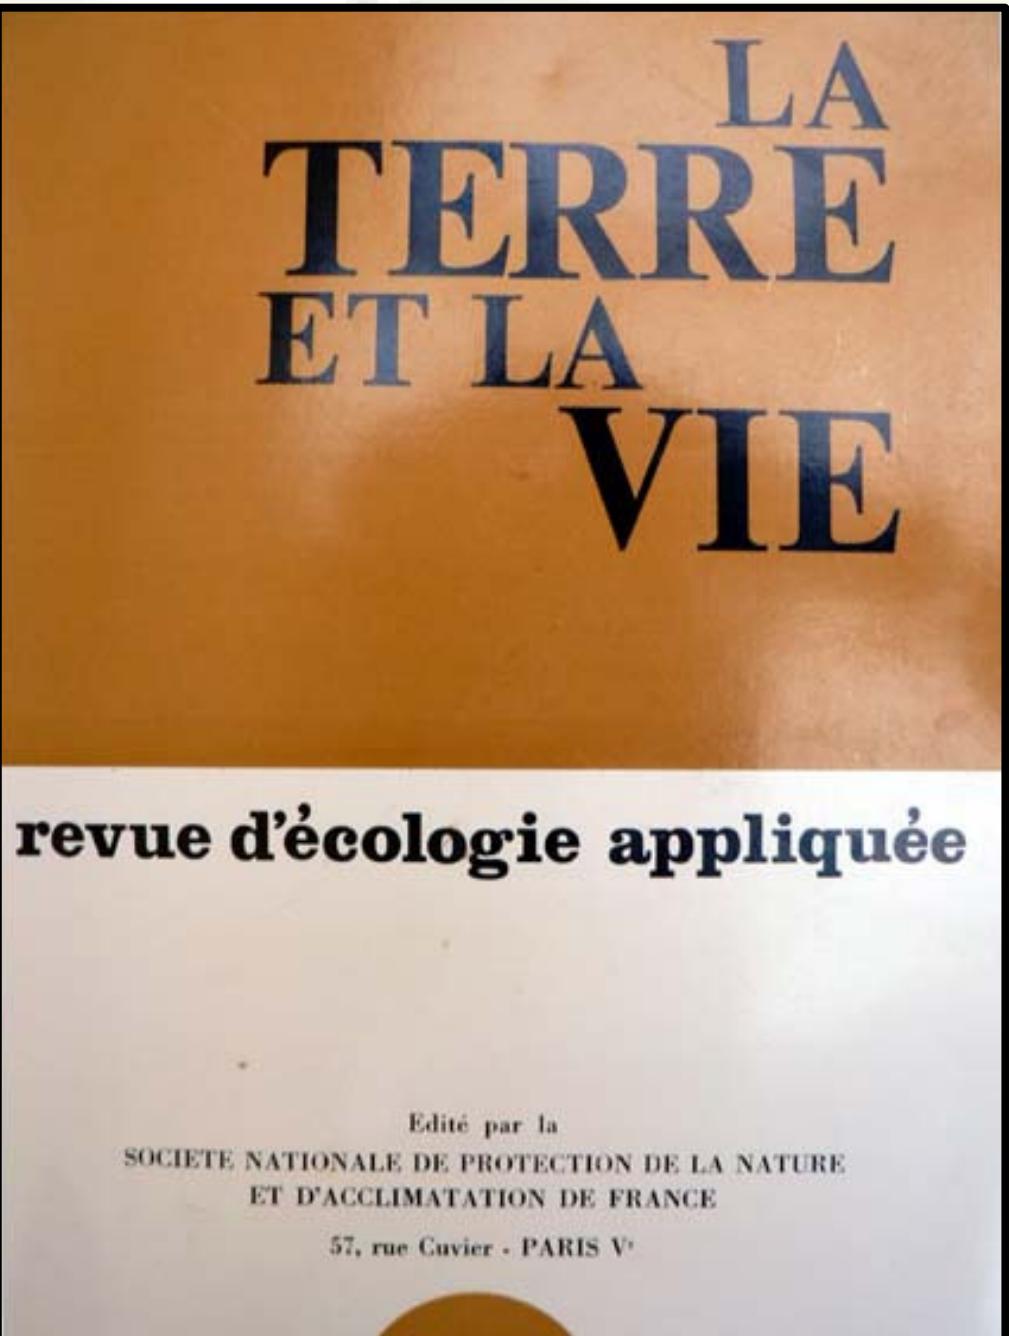

1950 -> : evolution of species composition
Recolonization of “climax” broadleaves and conifers into the planted pine forest

Ventoux: A natural lab for researches on forest dynamics...

1960 -> intensive study site for ecological studies on animal or plant communities, landuse... by Universities and research institutes.

Ventoux : long history of multidisciplinary researches

The Ecology of Mont Ventoux, Southern France

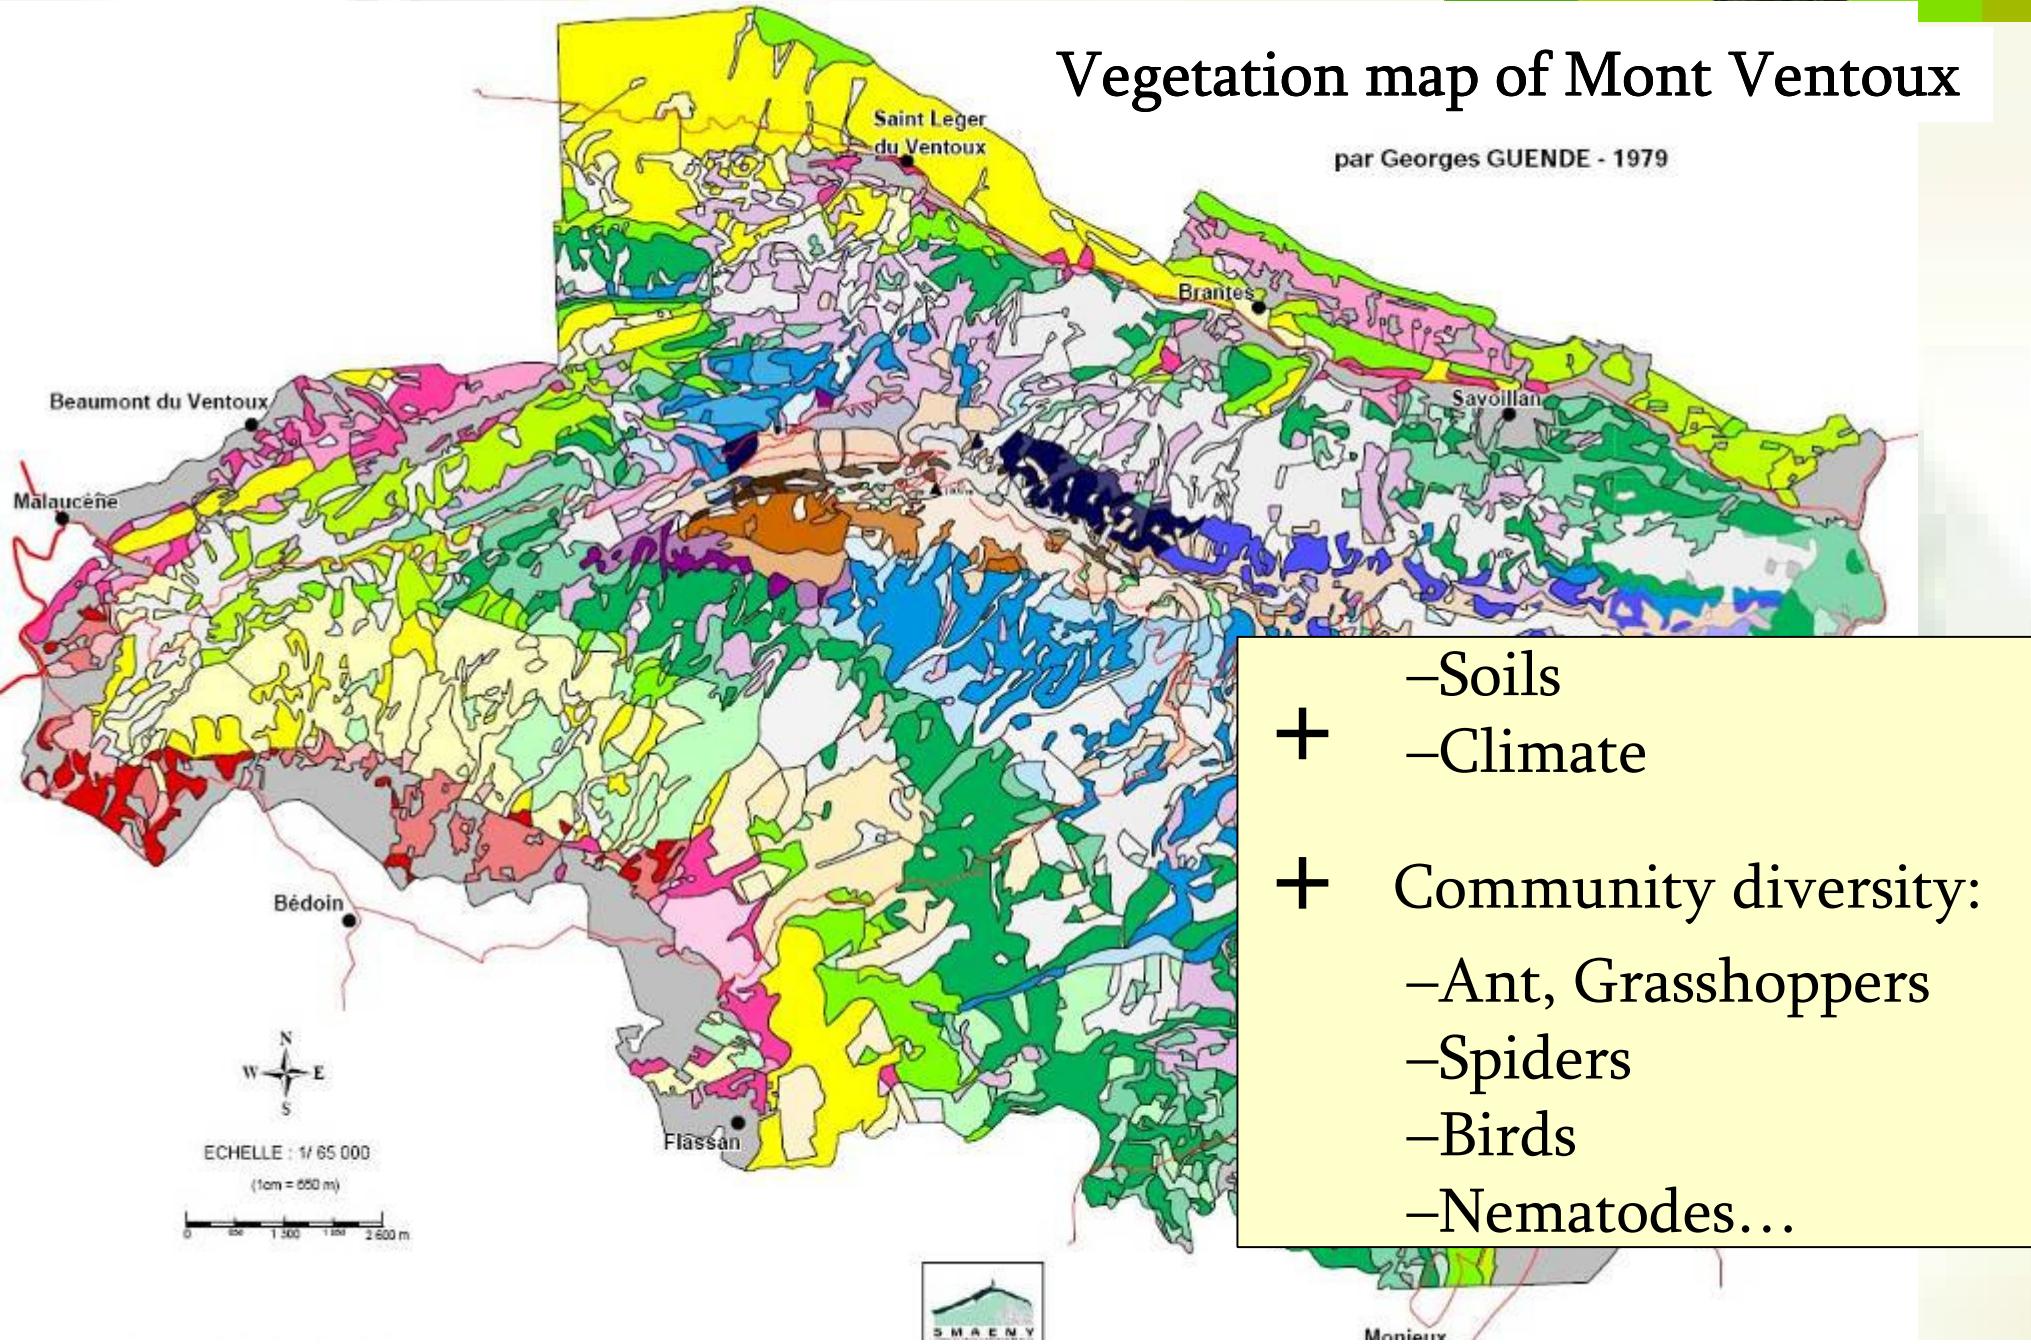

1978

P. du Merle (INRA Avignon) coordinator

(research program “Biological equilibrium in Mont Ventoux, 1972-1977)

Ventoux : Large diversity of communities & ecosystems

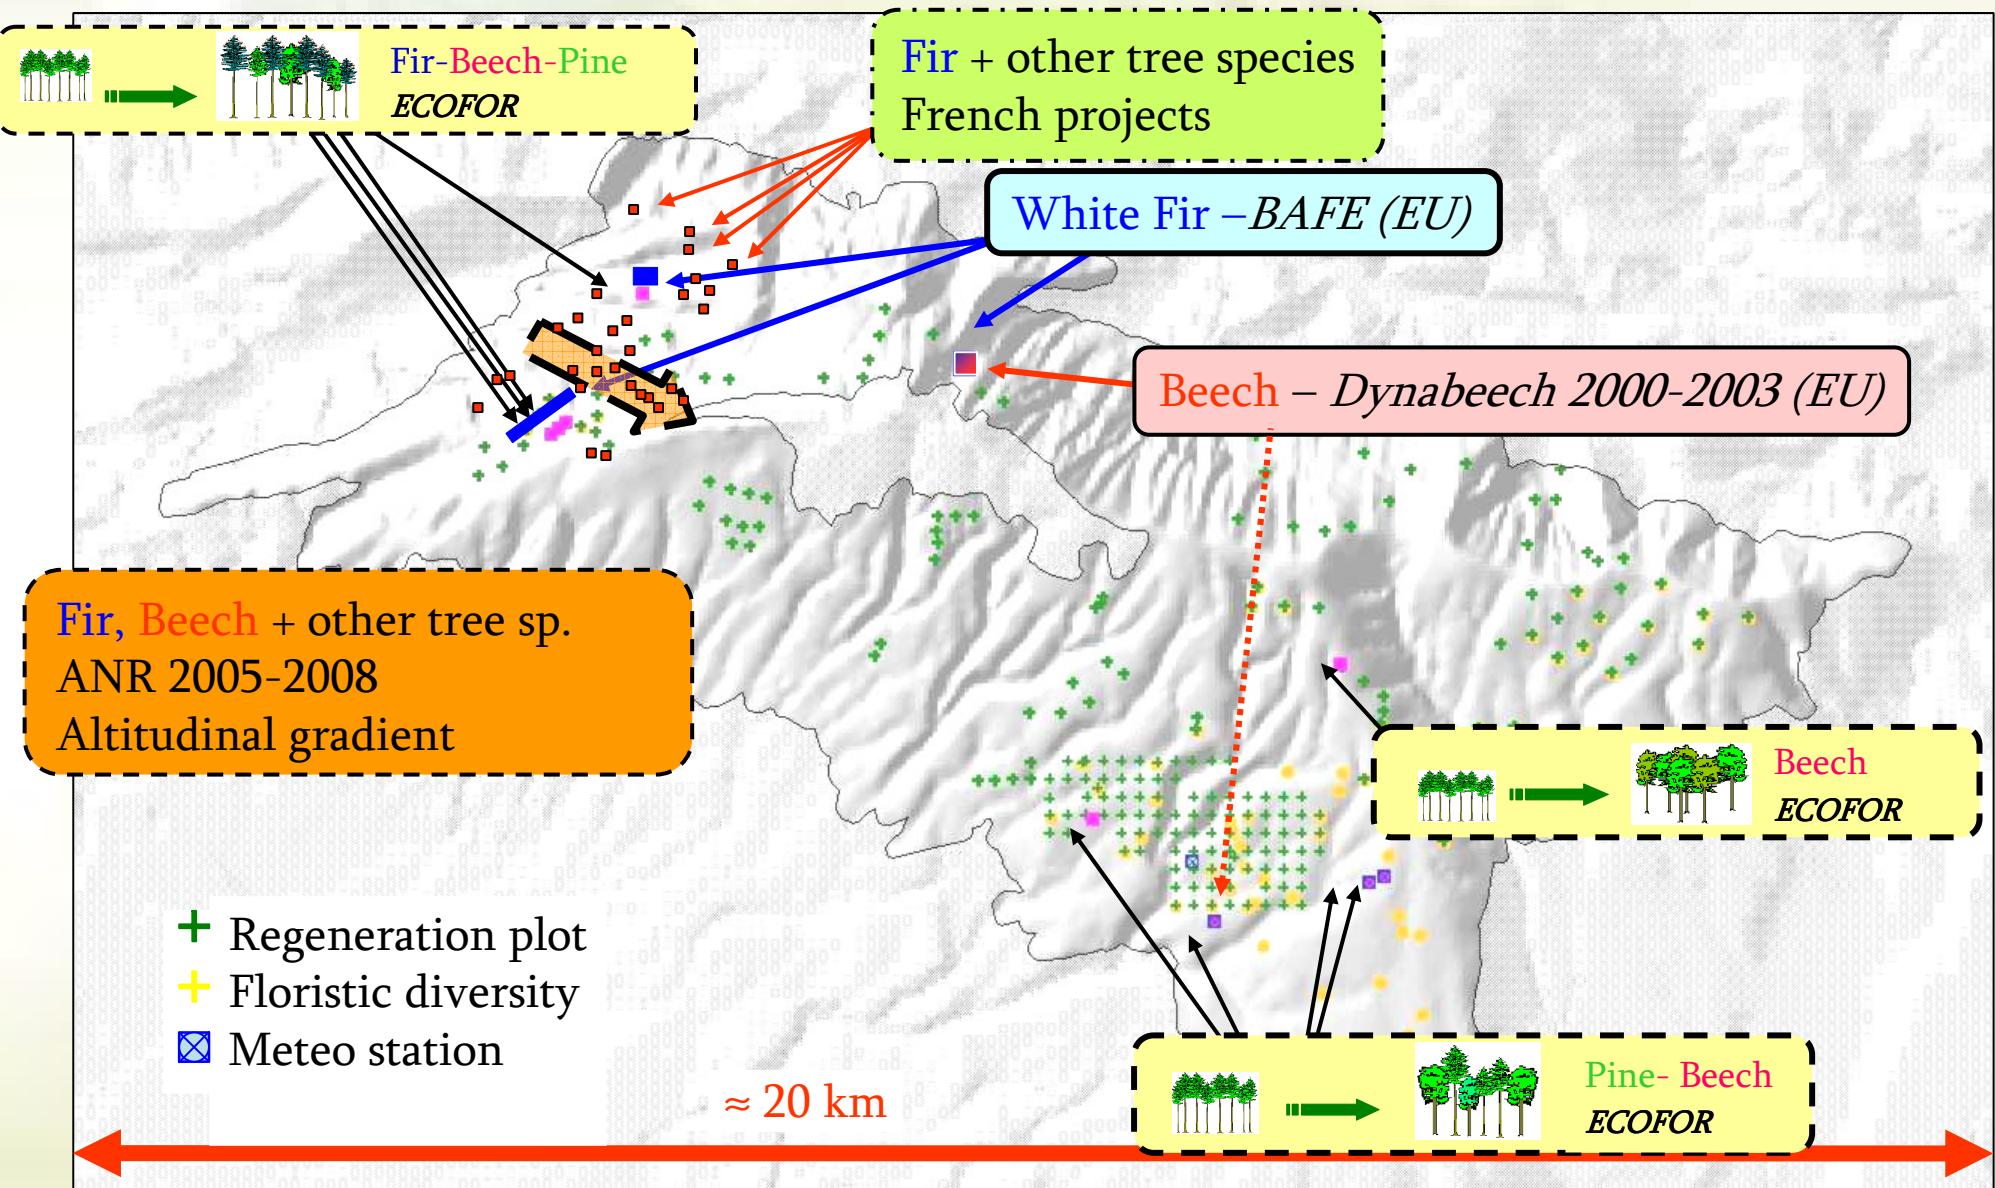

Ventoux : recent / ongoing ISP

NATIONAL 1998-2001 : ■ 10 sites of 0,5 to 1 ha (≈ 7 ha)
PROJECT + 214 permanent plots (≈ 12 ha)

Biodiversity survey +
Competition dynamics

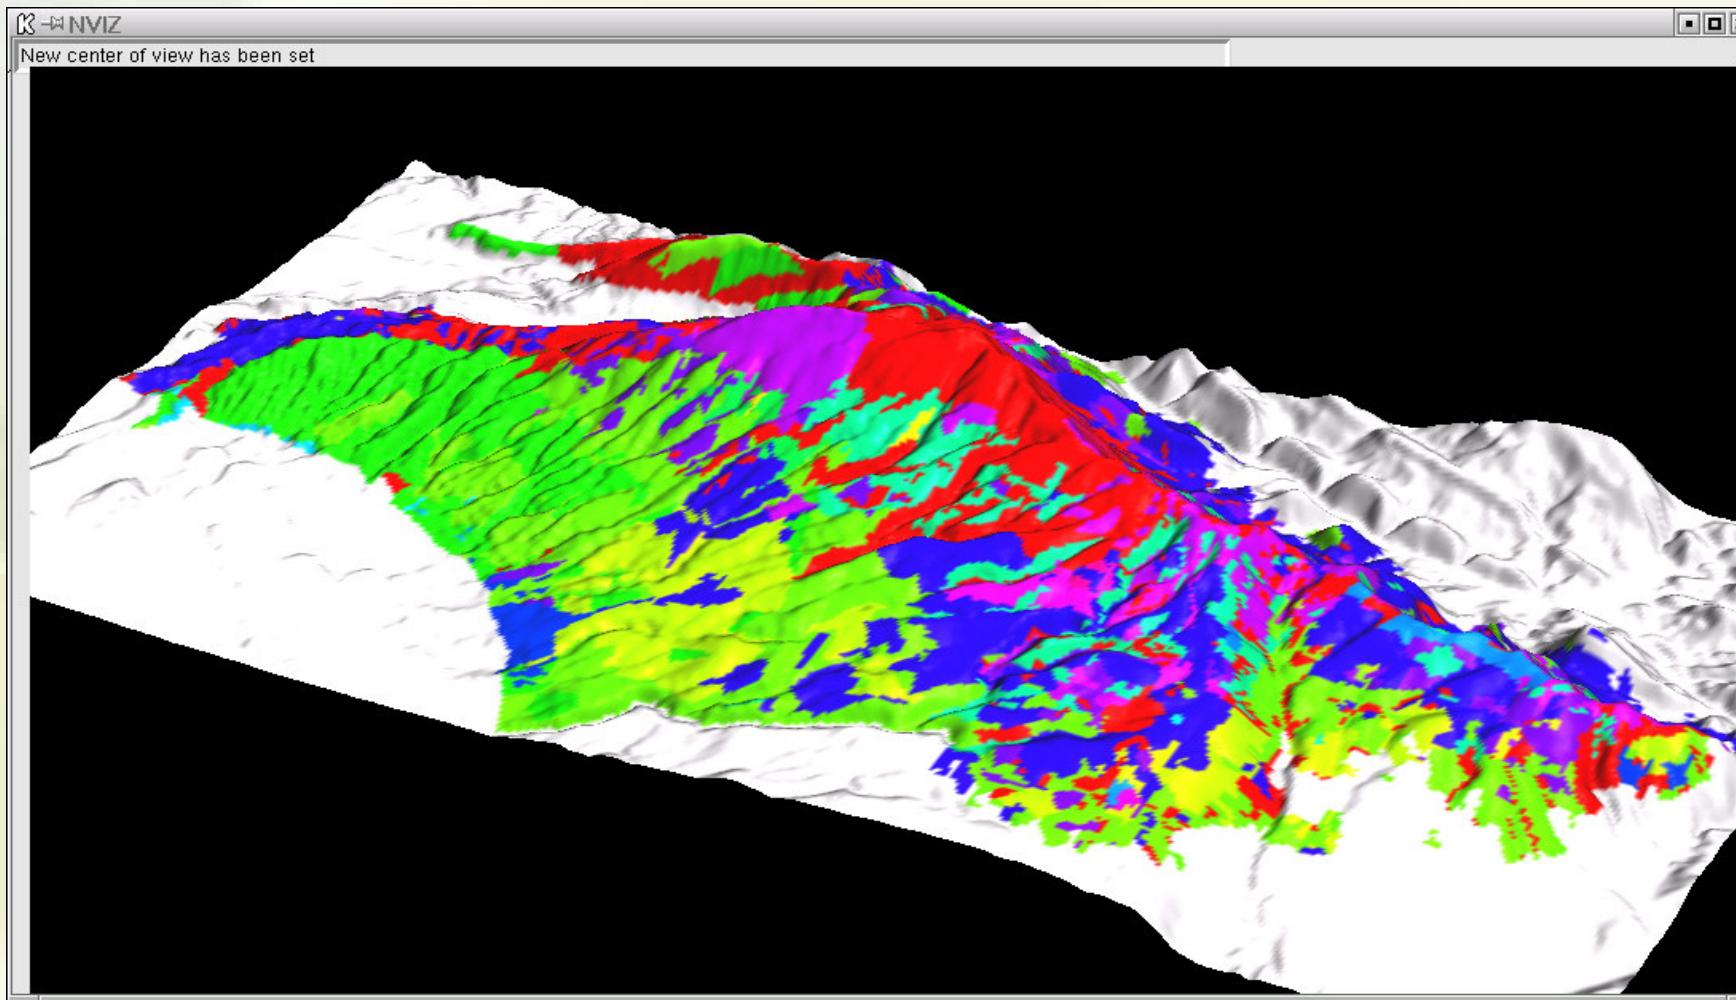

NATIONAL 2002-2003 : ■ 30 permanent plots (1,2 ha)

Ventoux : a large within site diversity of population, species & communities

- Sorbus aria
- Cedrus atlantica
- Quercus pubescens
- Quercus ilex
- Acer opalus
- Fagus sylvatica
- Larix decidua
- Pinus halepensis
- Pinus nigra Arn.
- Pinus pinaster
- Pinus nigra
- Pinus sylvestris
- Pinus uncinata
- other resinous species
- Mediterranean firs
- Abies alba
- no forest tree

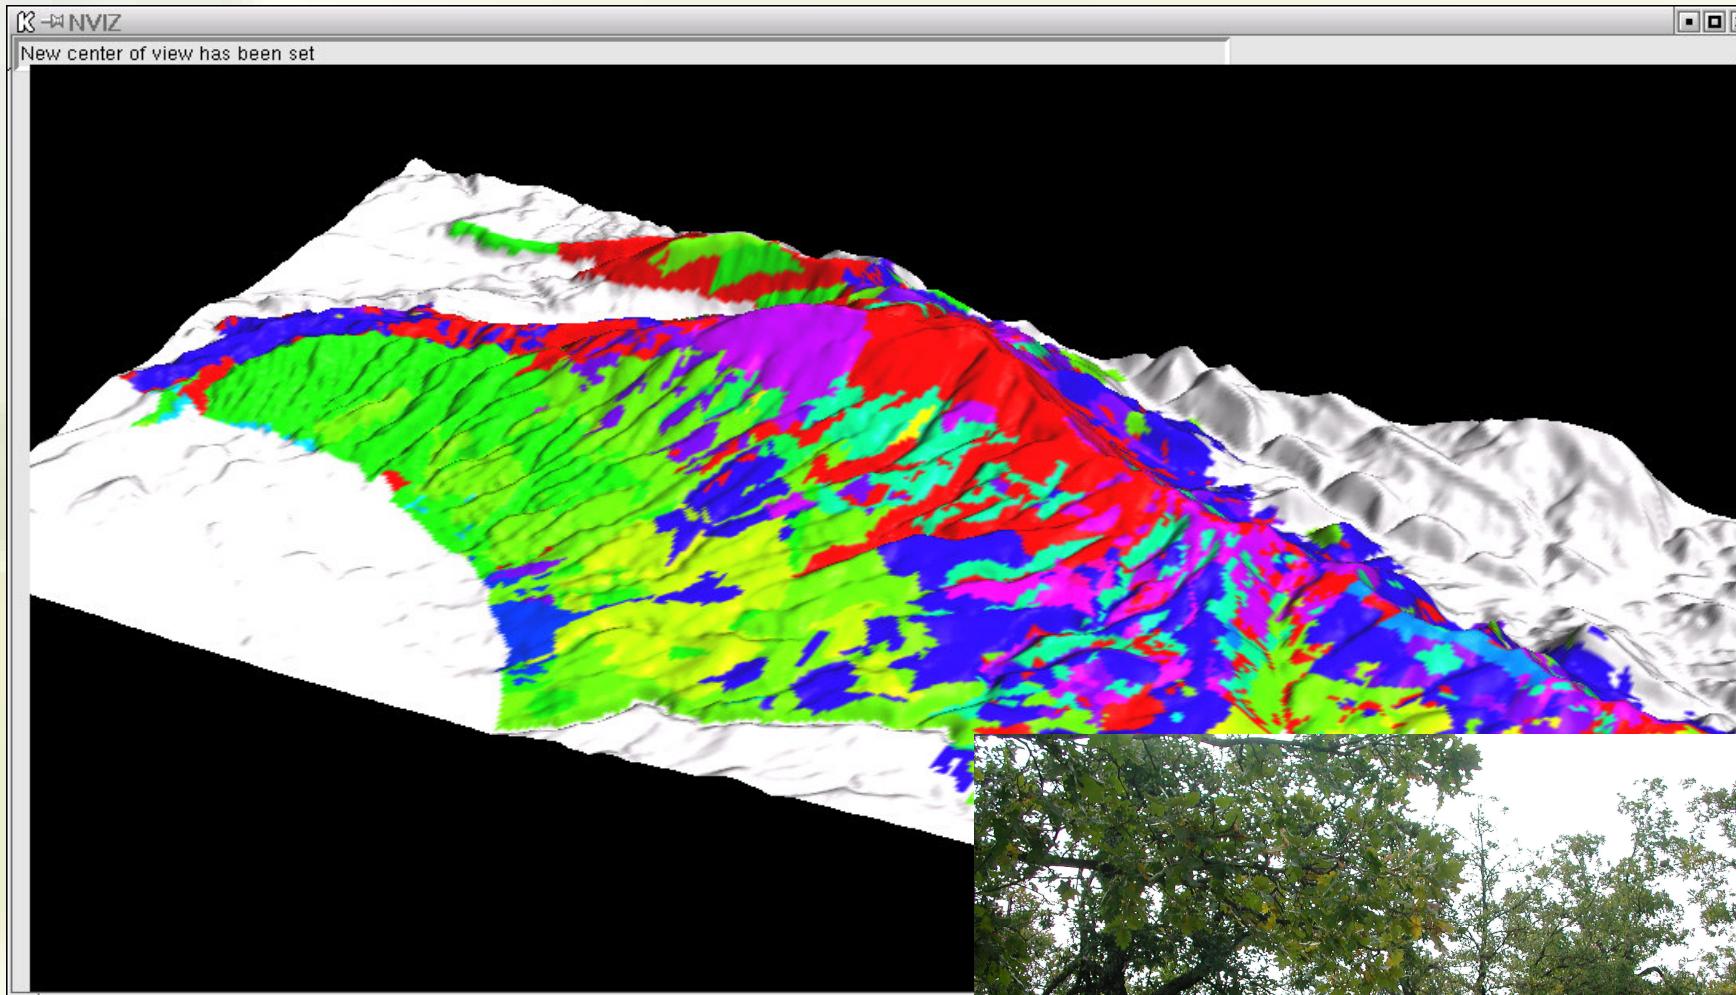

JERA3.1: Multi species genetic diversity

Ventoux : a large within site diversity of population, species & communities

- Sorbus aria
- Cedrus atlantica
- Quercus pubescens
- Quercus ilex
- Acer opalus
- Fagus sylvatica
- Larix decidua
- Pinus halepensis
- Pinus nigra Arn.
- Pinus pinaster
- Pinus nigra
- Pinus sylvestris
- Pinus uncinata
- other resinous species
- Mediterranean firs
- Abies alba
- no forest tree

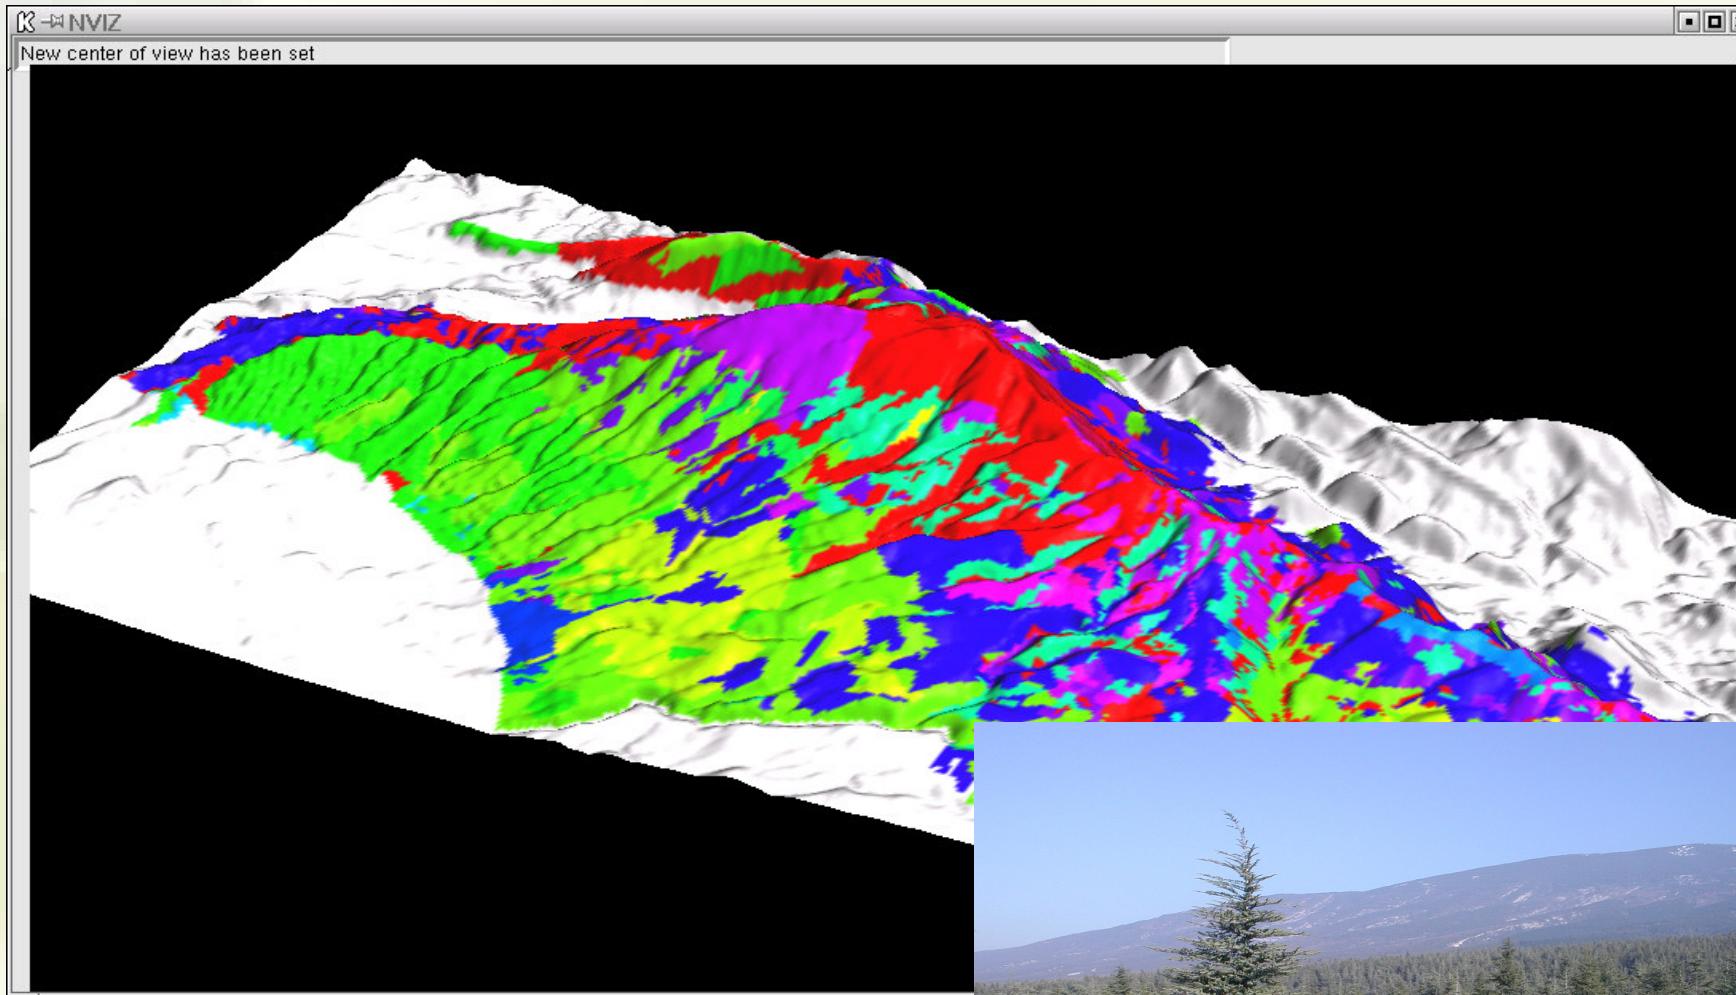

JERA3.1: Multi species genetic diversity

Ventoux : a large within site diversity of population, species & communities

- Sorbus aria
- Cedrus atlantica
- Quercus pubescens
- Quercus ilex
- Acer opalus
- Fagus sylvatica
- Larix decidua
- Pinus halepensis
- Pinus nigra Arn.
- Pinus pinaster
- Pinus nigra
- Pinus sylvestris
- Pinus uncinata
- other resinous species
- Mediterranean firs
- Abies alba
- no forest tree

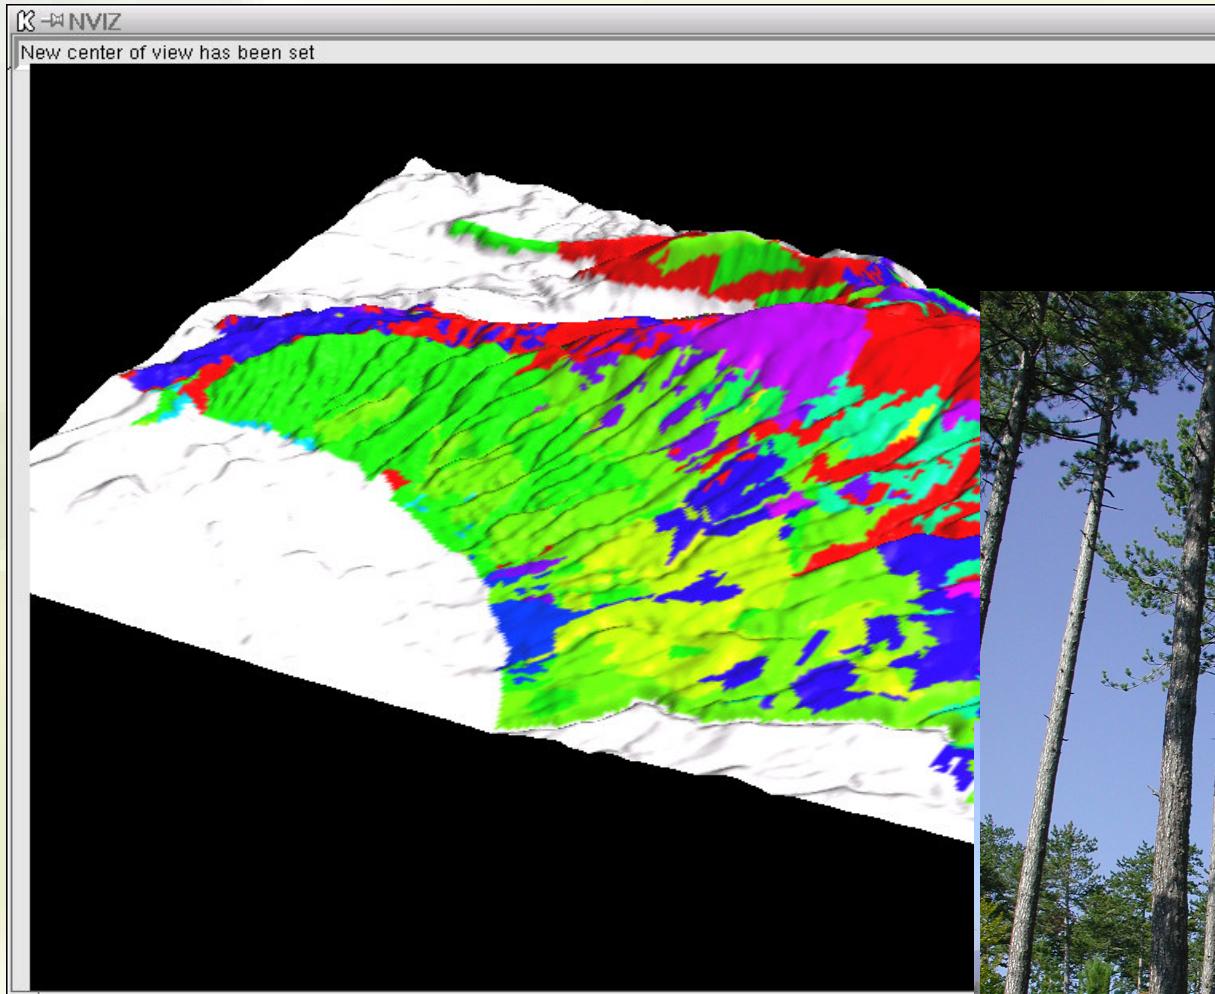

JERA3.1: Multi species genetic diversity

Ventoux : a large within site diversity of population, species & communities

- Pinus pinaster
- Pinus nigra
- Pinus sylvestris
- Pinus uncinata
- other resinous species
- Mediterranean firs
- Abies alba
- no forest tree

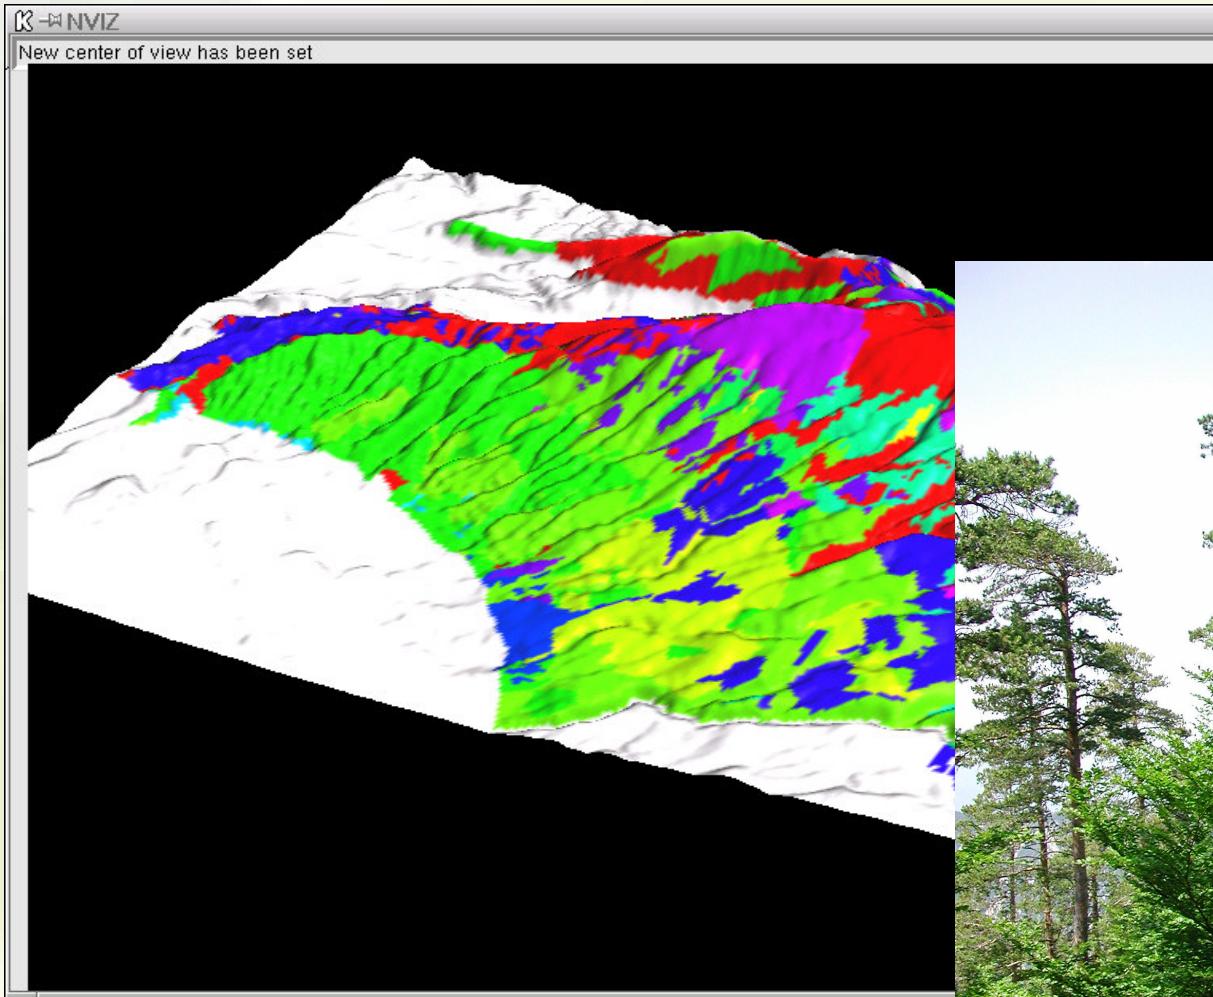

JERA3.1: Multi species genetic diversity

Ventoux : a large within site diversity of population, species & communities

- █ Sorbus aria
- █ Cedrus atlantica
- █ **Quercus pubescens**
- █ **Quercus ilex**
- █ Acer opalus
- █ Fagus sylvatica
- █ Larix decidua
- █ Pinus halepensis
- █ Pinus nigra Arn.
- █ Pinus pinaster
- █ Pinus nigra
- █ Pinus sylvestris
- █ Pinus uncinata
- █ other resinous species
- █ Mediterranean firs
- █ Abies alba
- █ no forest tree

JERA3.1: Multi species genetic diversity

Ventoux : a large within site diversity of population, species & communities

JERA3.1: Multi species genetic diversity

JERA 3.2: Interaction between species

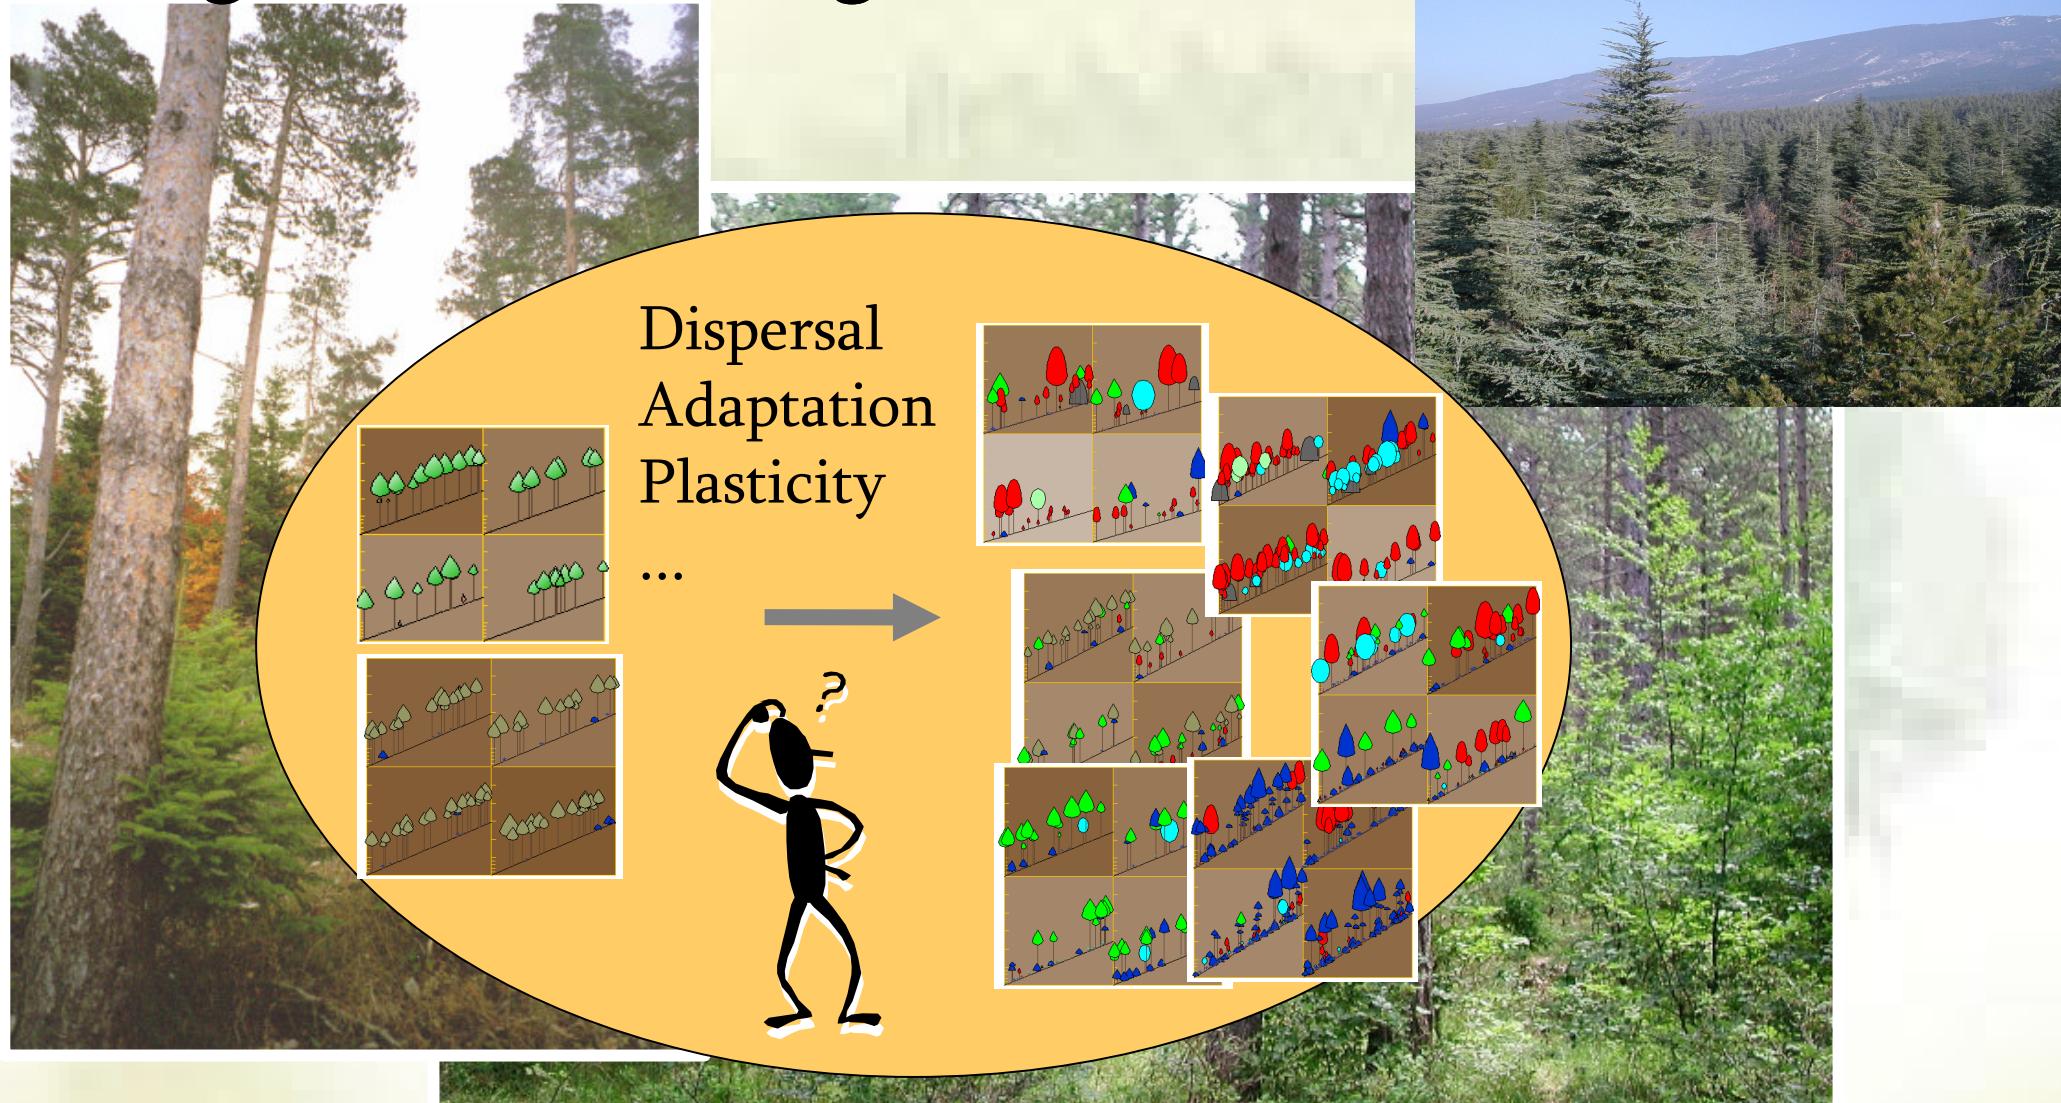

Ventoux : an ongoing re-colonisation dynamics along an altitudinal gradient

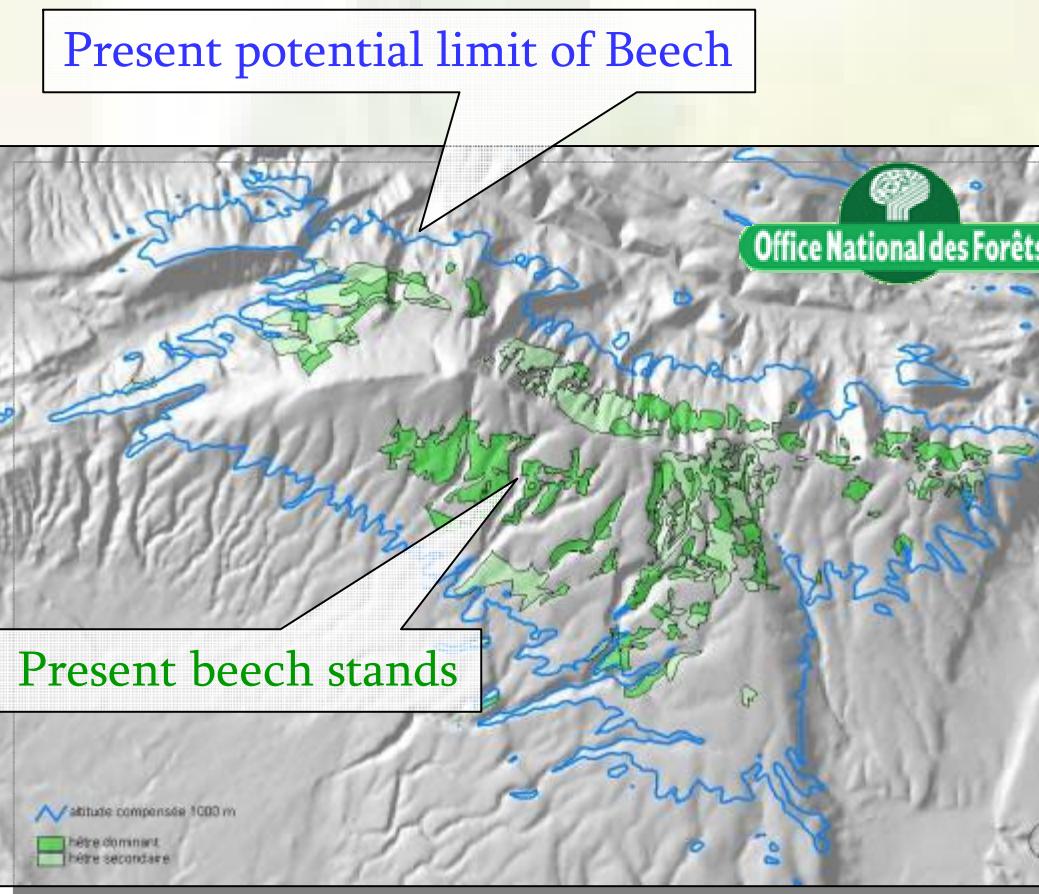

Jera 4.2 Response Of Populations To Global Change
Jera 4.3 Future Dynamics Of Diversity

Ph. Dieyfus et C. Pichot

Ventoux : an ongoing re-colonisation dynamics along an altitudinal gradient

Response of populations to global change

ISS scale pertinent to gauge how migration, adaptation, and plasticity respectively contribute to species response to climate change

Bioclimatic envelope model (STASH)

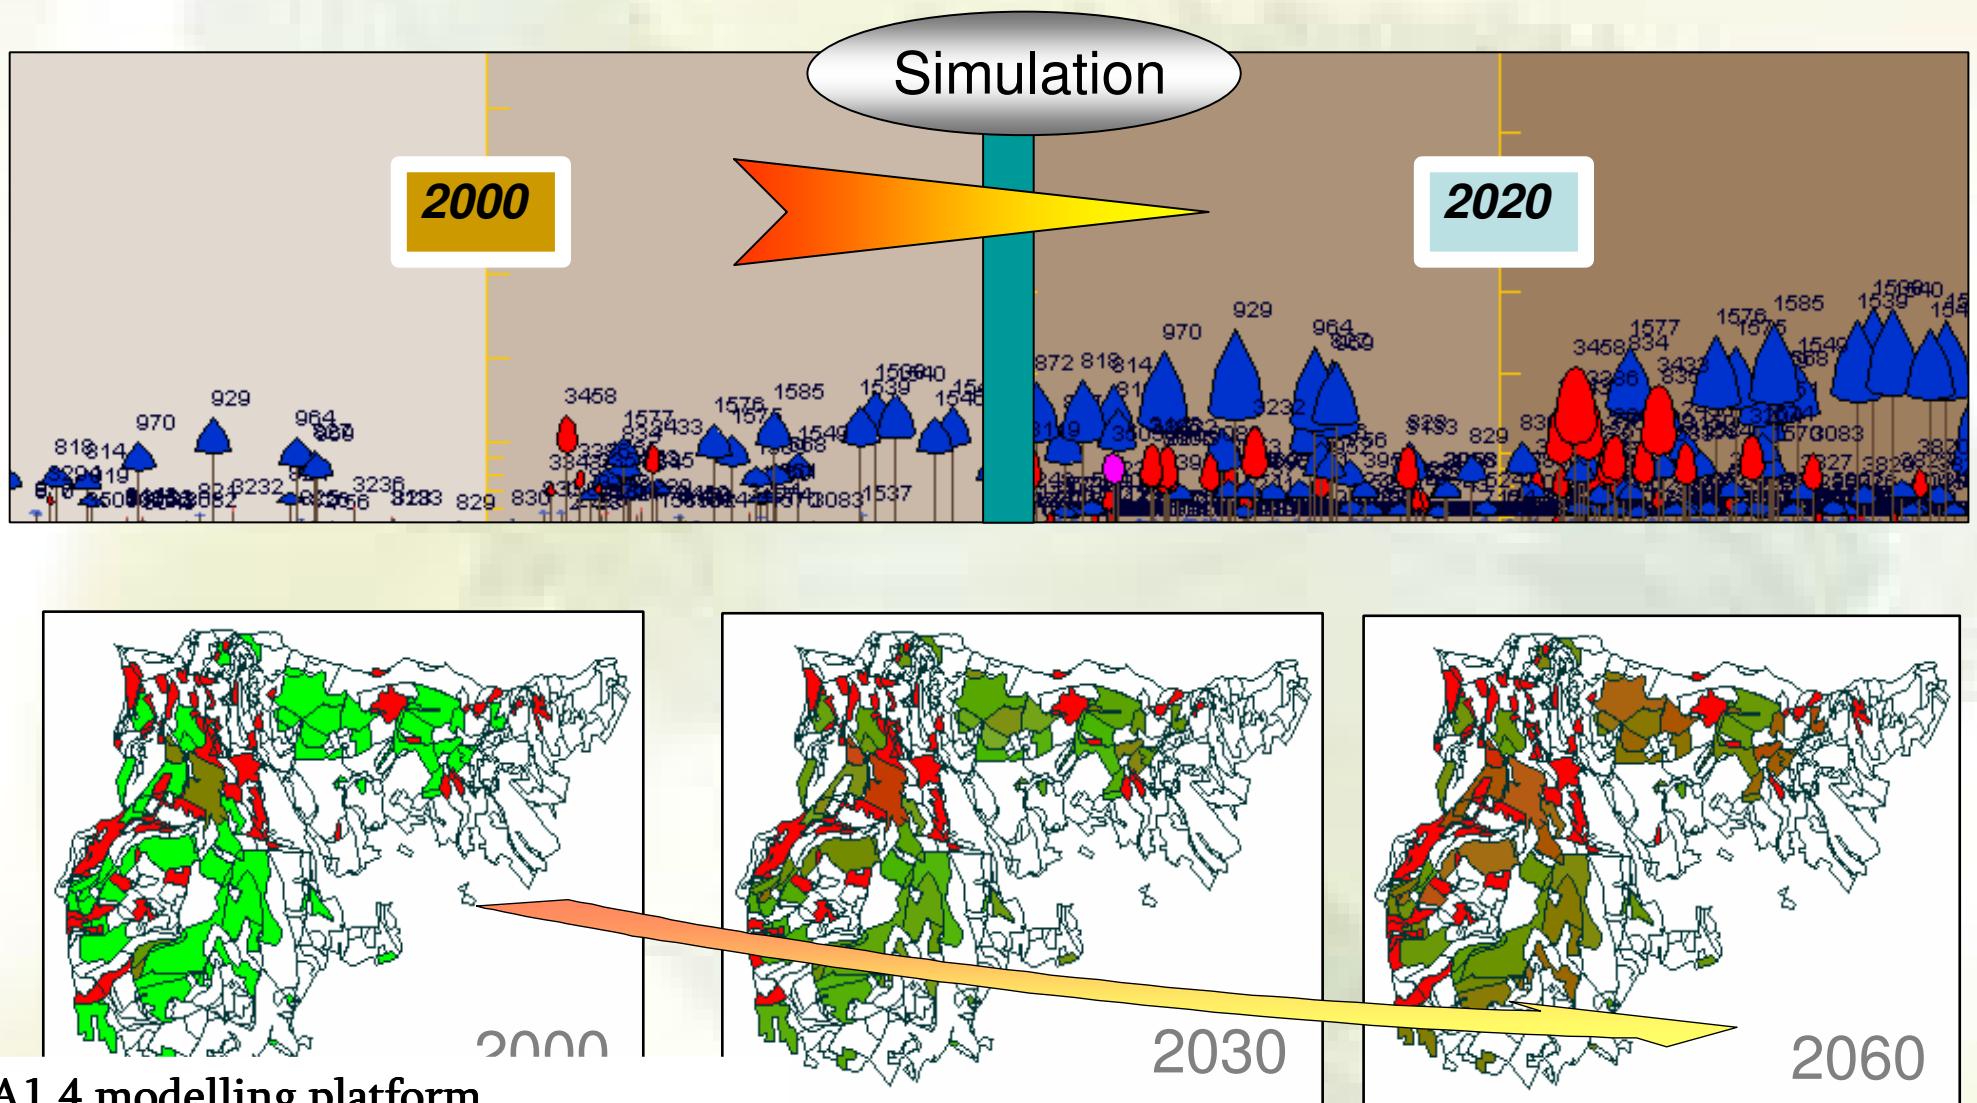

- Evolution for beech

0 - 1
1 - 2
2 - 3
3 - 4
4 - 5
5 - 6
6 - 7
7 - 8

9 - 10

Effect of 2003 heat-wave on Fir mortality

Ventoug : a simulation model available for coupling demography and genetics on the Ventoux site

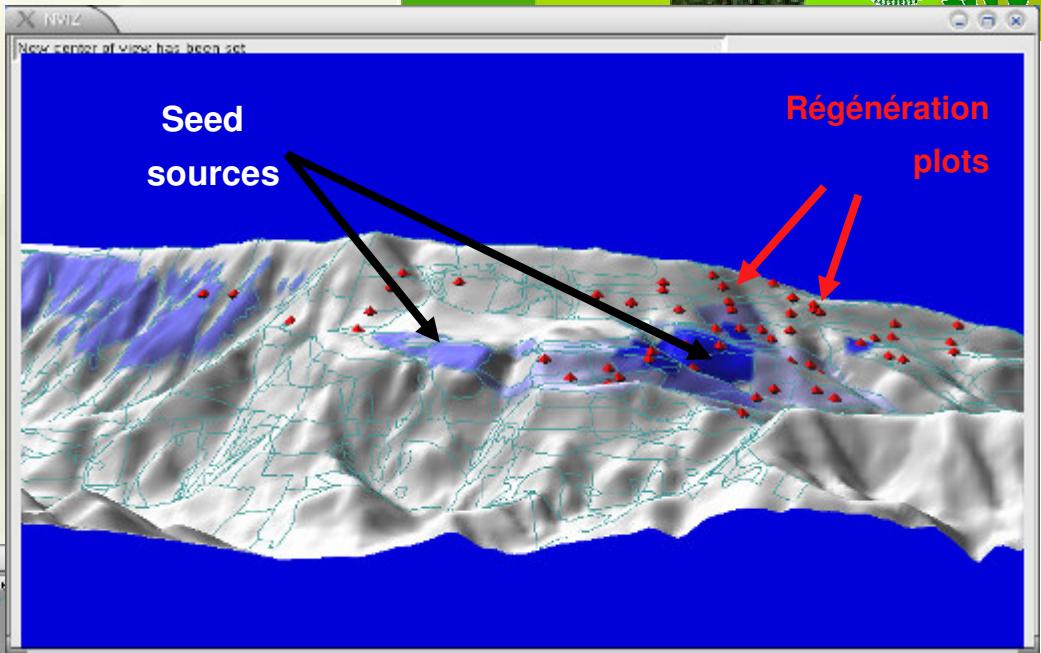

IA1.4 modelling platform
JERA 4.3 Future Dynamics Of Diversity

Ventoux : other available tools

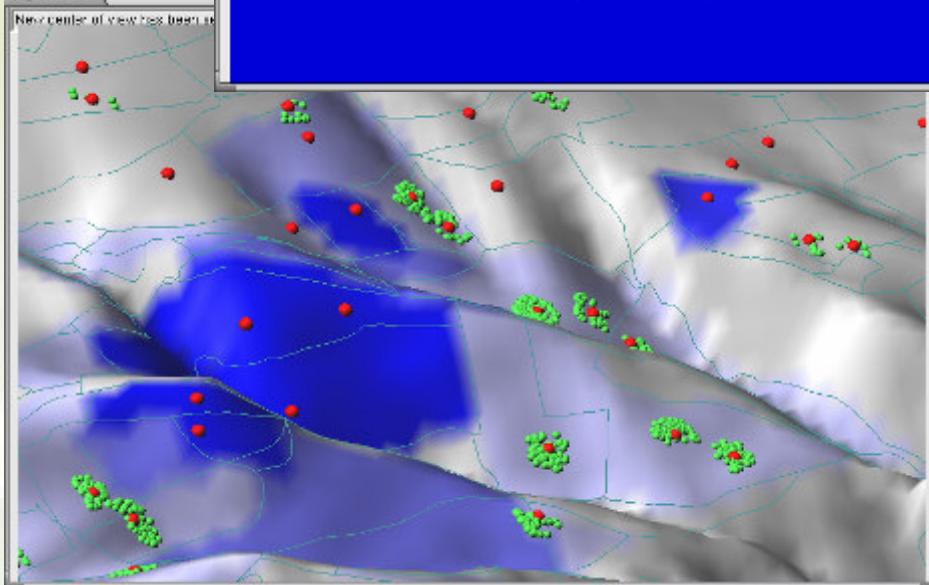

GIS – Database and GPS facilities :

- > Grass – Postgres Open software
- > High precision GPS (< 1 m)
- > Digital maps and aerial photographs

DNA Database :

- > cpSSRs, nSSRs
(*Abies alba*, *Fagus sylvatica*)

Ventoux : Conclusions

Highly instrumented site :

- Numerous ISPs
- GIS, GPS
- Modeling platform
- Long-term climatic data
- Molecular markers
- Biodiversity surveys (plants and animals)

Easily accessible site

- Central location for Mediterranean research teams
- 40 km from INRA research center (sample preparation, GIS)

Long-term perspective:

- Public forest, partnership with forest managers
- Legal/protection status:
MAB, conservation site for fir, Natura 2000

Local expertise:

- Community ecology,
- Population genetics and dynamics
- Entomology
- Ecophysiology
- Bioclimatology
- Modeling
- Biostatistics

Scientific value:

- Natural laboratory of a re-colonisation dynamics under global change
- Plant material for JERA 1, 2
- Strong links to JERA 3 & 4, to IA 4.1
- Past experience in infrastructure sharing with Mediterranean research teams
- High benefit of international cooperation to address these challenging issues
